**RE: Vecellio & Grogan's Safety Performance**

To Whom It May Concern:

Vecellio & Grogan conducted the following construction activities at the Virginia City Hybrid Energy Center job site from January 2008 through September 2009:

2.3 Million Cubic Yards of Excavation  
60,000 square feet of mechanically stabilized earth wall  
Two box beam bridges (88 and 101 feet in length)

Vecellio and Grogan worked a total of 121,759 man-hours during their 21 month tenure at the Virginia City Hybrid Energy site with only two recordable incidents and zero lost-time injuries.

Vecellio and Grogan followed the Shaw Group's strict safety, health and environmental standards expected of all of its sub-contractors. Their crews and management teams were able to demonstrate that they possessed a genuine commitment to safety, health and the environment. This kind of commitment will continue to be ever more important as the construction business passes through the twenty-first century.

Sincerely,

A handwritten signature in blue ink that reads "Stevan Demase".

Stevan Demase  
Senior Site Manager
